

# Secure Hybrid and Multi-Cloud Capabilities

## Modern solutions to enable greater mission impact at scale

Digital transformation is critical to helping federal health agencies enhance efficiencies, deliver services to citizens and healthcare organizations, and maximize data to improve health outcomes and equity. Technological advancements assist in these goals, but they can increase complexity. Advanced endpoint systems, cloud environments, networks, and third-party applications can create new pathways for bad actors to exploit. Traditional, perimeter-based security is no longer enough to protect sensitive personal health information (PHI) and other critical data from cyber adversaries.

The drive toward modernization presents government agencies with opportunities to deliver more resilient, scalable services to meet mission demands. These opportunities, directly aligned with the President's Management Agenda, call for a commitment to innovation, security, and customer experience (CX). Migration to the cloud can be key in enabling the journey away from legacy systems and toward a legacy of enhanced citizen services. But while secure cloud architectures can unlock significant benefits, choosing the right solutions and gaining strategic alignment to ensure a successful migration calls for a trusted partner to guide the way.

### Solutions that Work for Missions that Deliver

At Maximus, our commitment to security by design takes a front seat along with a sharp focus on cost efficiency and compliance. With industry leading security certifications and classifications (e.g., Department of Defense Impact Level 6, FedRAMP Moderate authorization), we protect the most sensitive and confidential data while helping agencies prepare for and respond to evolving cybersecurity threats as well as new regulations and requirements. Our solutions ensure the highest reliability and

availability of mission-critical systems, data, and applications. We provide:

- Tailored cloud solutions that leverage our deep expertise and knowledge of government operations, policies, and compliance requirements to address specific agency needs.

### Success Highlights

- **Developed first-of-its kind, cloud-based environment** for a successful Centers for Medicaid & Medicare Services (CMS) eligibility appeals program, resulting in faster processing times and improved CX
- **Migrated 40+ databases and 50+ applications** to the cloud to improve material and resource readiness for the Army's global land force
- Led the Securities and Exchange Commission's **first cloud migration for SEC.gov** and refactored its indispensable EDGAR system for cloud readiness, resulting in increased availability and scalability and doubling system throughput

- Comprehensive cloud services that cover the entire journey from readiness to migration to ongoing management and modernization - all with the agility of a small business paired with the resources of a larger enterprise.
- Strategic alliances with industry-proven cloud solution providers and technology vendors that are the driving force behind cloud innovation - giving us an edge in helping to set the direction and stay in the know on what's ahead.
- Seamless solutions integration across any cloud environment as the only federal systems integrator to provide FedRAMP JAB-authorized solutions across Internet as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS) platforms.

## Where the Cloud Meets the Horizon

Delivering end-to-end services for cloud strategy and implementation

Our customers realize value from cloud investments by envisioning the landscape both before and during migration. We keep an eye on the horizon by giving our customers the inside track on mission-supporting innovative technology, such as high-performance cloud computing, emerging supracloud computing, and edge-to-cloud advances.

### Customers

- Centers for Disease Control & Prevention
- Department of Commerce
- Department of Defense
- Department of Education
- Department of Energy
- Department of Health and Human Services
- Department of Homeland Security

- Department of Labor
- Environmental Protection Agency
- Internal Revenue Service
- Securities and Exchange Commission

- Agency Authority to Operate (ATO) services (Amazon Web Services GovCloud, Amazon Connect, Alvaria Workforce Management, SuccessKPI)

### Authorizations

- Department of Defense (DoD) Impact Level 6 (IL6)
- FedRAMP Moderate Impact Level (JAB Authorized)

### Multi-Cloud Solution Partners & Strategic Alliances

- Amazon Web Services (AWS)
- Google
- Salesforce

#### Adoption & Migration

- Conduct migration readiness assessments
- Implement cloud adoption framework
- Gain stakeholder alignment
- Choose applications for migration

#### Solutions Architecting & Orchestration

- Understand unique requirements
- Develop custom solutions aligned to business goals
- Enable seamless deployment and scaling

#### Platform Engineering

- Design & build scalable, secure cloud platforms
- Leverage advanced tools and automation for efficiency
- Streamline development, deployment, and maintenance

#### Adoption & Migration

- Conduct migration readiness assessments
- Implement cloud adoption framework
- Gain stakeholder alignment
- Choose applications for migration
