Business Process and Technology Consulting Services for the Department of Defense

AI and Advanced Data Analytics

AI/ML, robotic process automation (RPA), high-performance and edge computing capabilities for hyper-automation solutions and complex data analyses to help DOD maximize business process efficiencies and deliver actionable information for decision advantage.

Data Management & Governance

Our data mesh capabilities help break down data silos, increase data integration across the enterprise, and drive a culture of secure data-sharing and collaboration for data-driven decision making.

Digital Modernization & Solution Development

Our strategic, agile development process leverages extreme automation and DevSecOps to deliver secure, scalable, and compliant applications within a secure cloud environment.

Cloud Solutions

Our JAB-authorized Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), and Software-as-a-Service (SaaS) capabilities support cloud migration, managed hosting and reference architectures, platform engineering and data pipelines, and flexible, scalable, globally available applications.

Cybersecurity

From engineering and operations to threat hunting, penetration testing, digital forensics, and incident response, our solutions help optimize security posture for uninterrupted mission advantage.

Customer Services, Digitally Enabled

We optimize and mobilize people, processes and technology for a better total experience by drawing on our deep background designing and delivering scalable, innovative services supported by customer experience and human-centered design.
